LIST OF CONTENTS

NUMBER 1

S. W. Conning, L. E. Farmer and P. L. B. Oxley	1	Analysis of noisy data from flow measurements
A. D. Kerr and M. L. Accorsi	15	Numerical validation of the new track equations for static problems
K. B. Subrahmanyam and K. R. V. Kaza	29	Non-linear flap–lag–extensional vibrations of rotating, pretwisted, preconed beams including Coriolis effects
K. Chung and R. H. Wagoner	45	Numerical improvement of viscoplastic, non-linear, finite-element analysis
J. H. Bianchi and T. Sheppard	61	A comparison of a viscoplastic finite-element model with slip-line field and upper-bound solutions for non-hardening material subjected to plane strain and axisymmetric extrusion
S. Adali and H. Nissen	83	Micromechanical initial failure analysis of symmetrically laminated cross-ply plates
Announcement	93	First International Conference on Vibration Control in Optics and Metrology. London, U.K., 25–26 February 1987

NUMBER 2

G. M. Eggert and P. R. Dawson	95	On the use of internal variable constitutive equations in transient forming processes
A. G. Atkins	115	On the number of cracks in the axial splitting of ductile metal tubes
Z. H. Lu and D. Lee	123	Prediction of history-dependent forming limits by applying different hardening models
T. S. Noh and D. Y. Yang	139	An analysis of hydroforming of regular polygonal boxes
C. F. Lugora and A. N. Bramley	149	Analysis of spread in ring rolling

NUMBER 3

A. G. Mamalis, G. Gioftsidis and W. Johnson	159	Fracturing of paraboloidal-ended Perspex rods explosively loaded in air and salt water

Y. H. Kim and R. H. Wagoner	179	An analytical investigation of deformation-induced heating in tensile testing
M. M. Seddeik and J. B. Kennedy	195	Deformations in hollow structural section (HSS) members subjected to cold-bending
M. Hamada, I. Mizushima and T. Mifune	213	Bending of a simply supported circular plate subjected to elastic constraint for inclination at its edge
A. Valkonen, A. Chatterjee and J. P. Hirth	219	On the application of the Hutchinson–Tvergaard shear localization equations in plane strain

NUMBER 4

K. Mori and K. Osakada	229	Analysis of the forming process of sintered powder metals by a rigid–plastic finite-element method
H. Parvinmehr, G. R. Symmons and M. S. J. Hashmi	239	A non-Newtonian plasto-hydrodynamic analysis of dieless wire-drawing process using a stepped bore unit
K. Peleg	259	Power and energy in mechanical systems
C. Liu, P. Hartley, C. E. N. Sturgess and G. W. Rowe	271	Finite-element modelling of deformation and spread in slab rolling
O. P. Agrawal and S. Saigal	285	A novel, computationally efficient, approach for Hamilton's Law of Varying Action
A. G. Atkins	293	Letter to the Editor
P. S. Theocaris and N. Andrianopoulos	294	Authors' Reply
Announcement and Call for Papers	299	International Symposium on Structural Failure. Massachusetts Institute of Technology, Cambridge, Massachusetts, U.S.A., 6–8 June 1988

NUMBER 5

Special Honour Issue for Professor William Johnson on the occasion of his 65th birthday

Robert Maxwell	v	Foreword
S. R. Reid	vii	Introduction
	xi	Tributes

W. Johnson	301	Henri Tresca as the originator of adiabatic heat lines
N. Fujisawa and R. Kobayashi	311	Turbulence characteristics of wall jets along strong convex surfaces
C. M. Wang, S. Kitipornchai and V. Thevendran	321	Buckling of braced monosymmetric cantilevers
M. J. Todd and K. L. Johnson	339	A model for Coulomb torque hysteresis in ball bearings
D. Nowell and D. A. Hills	355	Mechanics of fretting fatigue tests
M. Poloni, D. E. Winterbone and J. R. Nichols	367	Comparison of unsteady flow calculations in a pipe by the method of characteristics and the two-step differential Lax–Wendroff method
Announcement	379	International Centre for Mechanical Sciences, 18 Piazza Garibaldi, Palazzo del Torso, I-33100 Udine, Italy. Programme 1987

NUMBER 6

W. J. Stronge and V. P.-W. Shim	381	Dynamic crushing of a ductile cellular array
D. W. Wu	407	Development of a dynamic shear angle model for wave-generating processes based on work-hardening slip-line field theory
Y. Xu, L. C. Zhang and T. X. Yu	425	The elastic–plastic pure bending and springback of L-shaped beams
G. N. Nurick, H. T. Pearce and J. B. Martin	435	Predictions of transverse deflections and in-plane strains in impulsively loaded thin plates
G. B. Warburton	443	Letter to the Editor
S. Christides and A. D. S. Barr	446	Authors' Reply
Announcement	447	Pan American Congress of Applied Mechanics. The Catholic University of Rio de Janeiro, Rio de Janeiro, Brazil, 3–6 January 1989

NUMBER 7

S. Durkin	449	An analytical method for predicting the ultimate capacity of a dented tubular member

Md. W. Uddin	469	Buckling of general spherical shells under external pressure
M. J. Brovman	483	Steady forming processes of plastic materials with their rotation
A. C. Jenkins and P. V. Desai	491	Closed form solutions for plane-strain ideal plastic deformations
N. A. Fleck and K. L. Johnson	507	Towards a new theory of cold rolling thin foil

NUMBER 8

G. G. Adams	525	Critical speeds for a flexible spinning disk
J. J. Webster, B. B. Sahari and T. H. Hyde	533	Elastic–plastic behaviour of a simply supported circular plate subjected to steady transverse pressure and cyclic linear radial temperature variation
B. Baharlou and A. W. Leissa	545	Vibration and buckling of generally laminated composite plates with arbitrary edge conditions
S.-X. Wu, Y.-W. Mai and B. Cotterell	557	Slip-line field solutions of three-point bend specimens with deep notches
D.-J. Zhou and J. Lian	565	Numerical analysis of superplastic bulging for cavity-sensitive materials
P. D. Mangalgiri, T. S. Ramamurthy, B. Dattaguru and A. K. Rao	577	Elastic analysis of pin joints in plates under some combined pin and plate loads
W. Johnson	587	An enginer hoist with his own pétard?
Announcements	601	International Symposium on Structural Failure. Massachusetts Institute of Technology, Cambridge, Massachusetts, U.S.A., 6–8 June 1988
	603	Symposium on Advances and Trends in Computational Structural Mechanics and Fluid Dynamics. Sheraton National Hotel, Washington, D.C., U.S.A., 17–19 October 1988

NUMBER 9

W. S. Utting and N. Jones	605	The response of wire rope strands to axial tensile loads—Part I. Experimental results and theoretical predictions
W. S. Utting and N. Jones	621	The response of wire rope strands to axial tensile loads—Part II. Comparison of experimental results and theoretical predictions
P. K. Banerjee, R. B. Wilson and S. T. Raveendra	637	Advanced applications of BEM to three-dimensional problems of monotonic and cyclic plasticity
T. Y. Reddy, S. R. Reid, J. F. Carney III and J. R. Veillette	655	Crushing analysis of braced metal rings using the equivalent structure technique

NUMBER 10/11

Y. S. Lee and H. Gong	669	Application of complex variables and pseudo-stress function to power-law materials and stress analysis of single rigid inclusion in power-law materials subjected to simple tension and pure shear
S. Andersson	695	Assessment of the blade skew and the through flow velocity gradients in hydrodynamic torque converters
S. P. Timothy, J. M. Pearson and I. M. Hutchings	713	The contact pressure distribution during plastic compression of lead spheres
Z. Marciniak	721	Non-uniformity of strains in shearing within the warm-forming temperature range
Y. Zhu, B. Dodd, R. M. Caddell and W. F. Hosford	733	Convexity restrictions on non-quadratic anisotropic yield criteria
B. F. Ronalds and P. J. Dowling	743	A denting mechanism for orthogonally stiffened cylinders
D. C. Sun, K.-K. Chen and H. D. Nine	761	Hydrodynamic lubrication in hemispherical punch stretch forming—modified theory and experimental validation

NUMBER 12

777 Obituary — Professor Geoffrey Whaley Rowe, 1924–1987

I. H. Yang and C. R. Liu	779	Buckling and bending behaviour of initially stressed specially orthotropic thick plates
P. Tuğcu and K. W. Neale	793	Analysis of plane-strain neck propagation in viscoplastic polymeric films
K. Neglo, E. Chater and K. W. Neale	807	Effects of the shape of a geometric defect and of interactions between defects on limit strains for biaxially stretched sheets
C. K. Sung, B. S. Thompson, M. V. Gandhi and C. Y. Lee	821	A methodology for synthesizing symmetric laminated beams with optimal elastodynamic response characteristics
Qian Ling-Xi	831	New insight into an ancient stone arch bridge—the Zhao-Zhou Bridge of 1400 years old
